Tyst 2 person pod with high level work surface.

Tyst consists of an inner aluminium tube frame with various apertures & cross bars to allow inner & outer panels along with work surfaces to be securely fixed.

Outer panels are from 18mm MFC in a range of finishes & are hooked onto the aluminium subframe. The top panel bolts into place locking on the side panels.

Inner vertical panels can be MFC or a composite construction of 18mm MFC base panel, acoustic foam inter layer & fabric outer layer.

Inner ceiling panels are 18mm MFC with a central steel fabricated air & light cassette housing induction fans & LED lighting strips. Air is blown into the pod from the ceiling & escapes via concealed venting within the inner & outer base panels via an acoustically baffled plenum.

Proprietary glazing from your selected manufacturer then fits between the sides & ceiling to tailor the acoustic performance to the end users requirements.
